**A call to action on green freight in cities**

EcoMobility Dialogues / Technical Paper

September 2015

By Sudhir Gota

in brief

Freight travel across the globe, but it is the first and last mile that is often most costly and emission intensive. Improving the efficiency of the 'first and last mile' of deliveries is of great importance for economic growth, environmental sustainability and livability of cities. Sudhir Gota has analysed the drivers, strategies and instruments to greener urban freight systems.

Brazil-Germany Symposium on Sustainable Development The Brazil-Germany Symposium on Sustainable Development was held for the first time in 2003, in Tübingen, Germany. 2020; 10(7):116. The results reveal significant differences in the degree of sustainable urban liveability for this group of cities, but more importantly, they highlight the potential of this proposal for urban management. The objective of the project, carried out by the University of São Paulo's Luiz de Queiroz School of Agriculture (ESALQ), in partnership with the Westfälische Wilhelms-Universität Münster (WWU Münster), is to study the characteristics of the adaptation of some wild species to adverse conditions. "The objective is to directly manipulate the wild species at the gene level, in order to domesticate them from square one and, thus, take advantage of their adaptation to adverse environments – like dryness, salinity, and predators," explains Lázaro Eustáquio Pereira Peres, who heads up the ESALQ project, along with Jörg Kudla, from WWU. "Basically, this means doing quickly what our ancestors took the last several thousand years to do," Peres pointed out, regarding the selection performed down through the history of humanity of the types that best serve for large-scale cultivation. The second contribution is the use of a non-compensatory aggregation technique in order to construct the composite index. Najjar, Ahmed W.A. Hammad, Assed Haddad, and Elaine Vazquez. The study was presented during the 6th Brazil-Germany Dialogue on Science, Research, and Innovation, in November 2017, which was organized by the German Center for Research and Innovation – São Paulo (DWIH São Paulo), by the Research Foundation of the State of São Paulo (Fapesp), and by the Brazilian Ministry of Science, Technology, Innovation, and Communication (MCTIC). In the closing session, binational and cooperative programs were presented by the German Academic Exchange Service (DAAD), the German Society for Research Funding (DFG), the DWIH São Paulo, and other organizations. 2019; 11(1):86. Article Metrics Open AccessArticle by 1,\* 1 and 2 1 Department of Applied Economics, Faculty of Economics and Business Administration, University of Santiago de Compostela, Av. Burgo das Nacións s/n, 15782 Santiago de Compostela, Spain 2 Department of Economics, Business and Economy School, University of A Coruña, Elviña Campus, A Coruña 15071, Spain \* Author to whom correspondence should be addressed. This comes back to the fact that 100% of the mandatory LEED-ND items were not achieved, which means that this project as it was conceived cannot be considered as a sustainable urban solution. 1: 86. This work aims to analyze a real urban project, still in the executive project phase, Morro do Encontro project, in the scenario of the slum area of Rio de Janeiro based on the LEED-ND indicator system. Chicago/Turabian Style de Siqueira, Ana C.H., Mohammad K. Sustainable Urban Liveability: A Practical Proposal Based on a Composite Indicator. The event was organized by the PUCRS Environmental Institute (IMA), the Baden Württemberg Brazilian Center of the University of Tübingen, and by the Institute of Earth Sciences of the University of Heidelberg. The discussions were divided among 14 sessions on topics related to sustainable development. "Sustainable Urban Liveability: A Practical Proposal Based on a Composite Indicator" Sustainability 11, no. Sustainable Urban Development in Slum Areas in the City of Rio de Janeiro Based on LEED-ND Indicators. 2019. "Sustainable Urban Development in Slum Areas in the City of Rio de Janeiro Based on LEED-ND Indicators" Buildings 10, no. In the joint project, Peres and Kudla use the knowledge already gained by science regarding the genetic modifications of a parent of the tomato species. It was supported by Capes (Coordination for the Improvement of University Personnel (Capes), the German Centre for Research and Innovation São Paulo (DWIH São Paulo), the Baden Württemberg Brazilian Center of the University of Tübingen (Bw-), Johannes Kärcher, the Stihl company, and others. The species studied, called Solanum galapagense, is naturally resistant to salinity. 2020. The proposed composite index for sustainable urban liveability is applied to the case of 58 Spanish cities. This issue has been identified in the city of Rio de Janeiro in Brazil. The first is a proposal for the concept of sustainable urban liveability that includes the need to meet a minimum number of environmental conditions in terms of resource consumption and the deterioration of the environment. A total of 12 boards of the discipline of Urbanism in the executive project phase are studied. The research could help unveil different mechanisms and make broader manipulations possible in the future, thus extending the knowledge to other species. In 2019, the ninth edition of the symposium will be held, and the venue is in Germany, under the topic "Integrating Systems for Sustainable Development – A Cross-Continental Partnership". AMA Style Valcárcel-Aguilar B, Murias P, Rodríguez-González D. With its cross-disciplinary approach, the symposium is structured with four days of presentations, roundtable discussions, debates, and a panel discussion time with Professors from Germany and Brazil, as well as a one-day excursion. The main points were water and oceans, public health, food safety and agriculture, bioeconomy, biodiversity, sustainable mining, renewable energy sources, development of a green infrastructure in urban areas, climate change, social and environmental responsibility, ethics, and environmental law. Sustainability 2019, 11(1), 86; Received: 15 November 2018 / Revised: 17 December 2018 / Accepted: 19 December 2018 / Published: 24 December 2018 This article presents a proposal for a composite index to assess the degree of sustainable urban liveability. In the particular context of sustainable urban liveability, it prevents poor performance by the natural environment indicators from being compensated by positive results in the remaining indicators. Sustainability, Buildings. The novelty of this study is to evaluate the existing relationships between urban development actions and sustainability, through LEED-ND indicators, in the proposals of the Brazilian government plan PAC2, as a means of verifying their effectiveness. View Full-Text Keywords: sustainable urban liveability; urban liveability; composite indicator; goal programming; Spanish cities sustainable urban liveability; urban liveability; composite indicator; goal programming; Spanish cities ► Show Figures div data-cytle-log=false> This is an open access article distributed under the Creative Commons Attribution License which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly cited Supplementary File 1: PDF-Document (PDF, 669 KiB) Share and Cite MDPI and ACS Style Valcárcel-Aguilar, B.; Murias, P.; Rodríguez-González, D. The results found indicated 47 sustainability items were not met and, therefore, can be improved. 7: 116. Open AccessArticle by 1, 2, 3, 4 and 1,\* 1 Programa de Engenharia Urbana, Universidade Federal do Rio de Janeiro, Rio de Janeiro 21941-909, Brazil 2 Centro Universitário Gama e Souza (UNIGAMA), Rio de Janeiro 22621-090, Brazil 3 Faculty of Built Environment, University of New South Wales, Sydney 2052, Australia 4 Programa de Engenharia Ambiental, Universidade Federal do Rio de Janeiro, Rio de Janeiro 21941-909, Brazil \* Author to whom correspondence should be addressed. In 2017, the 8th Brazil Germany Symposium on Sustainable Development, held in October at the Catholic University of Rio Grande do Sul (PUCRS), in the city of Porto Alegre, brought together some 250 participants. Buildings 2020, 10, 116. This kind of aggregation technique does not allow trade-offs between partial indicators. It makes two key contributions to this field of study. Sustainability 2019, 11, 86. Article Metrics Researchers from Germany and Brazil lead an ambitious and pioneering project that, in the future, will likely help ensure food safety for people, in the face of climate change. AMA Style de Siqueira ACH, Najjar MK, Hammad AWA, Haddad A, Vazquez E. It evolved along the coastal regions of the Galapagos Islands and was collected for the first time by Charles Darwin, in 1835. Peres says. The objective of the event, which is held every two years, alternating among the two countries, is to present and discuss the differences between Brazil and Germany, in terms of sustainable development, relating cultural identity with the earth's resources and their processes. One of the solutions provided for this theme is the application of specific methodologies to measure sustainability in urban areas such as the case of Leadership in Energy and Environmental Design for Neighborhood Development (LEED-ND). Energy, water, soil, climate, biodiversity, agriculture and forestation, policies, economy, and health are analyzed and discussed in their distinctive particularities for the purpose of seeking solutions and new opportunities for the progress of sustainable development. Buildings 2020, 10(7), 116; Received: 3 May 2020 / Revised: 16 June 2020 / Accepted: 22 June 2020 / Published: 28 June 2020 The accelerated urban transition and its consequent unsustainability is a problem registered in several global scenarios. View Full-Text Keywords: urban development; growth acceleration program; sustainability indicators urban development; growth acceleration program; sustainability indicators ► Show Figures div data-cytle-log=false> This is an open access article distributed under the Creative Commons Attribution License which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly cited Share and Cite MDPI and ACS Style de Siqueira, A.C.H.; Najjar, M.K.; Hammad, A.W.A.; Haddad, A.; Vazquez, E. A total of 8% of credit items (CI) and 33% of mandatory items (MI) are attended. After the presentations, a delegation of over 20 people, formed by representatives of the University of Tübingen and PUCRS, visited the Pró-Mata research station, in the protection area of the endangered araucaria trees in the vicinity of the city of Porto Alegre. The analyzed items are divided into credit items and mandatory items. Chicago/Turabian Style Valcárcel-Aguilar, Beatriz, Pilar Murias, and David Rodríguez-González.
